

In 2006 when the United Nations report **Livestock's Long Shadow** was published, the then Government did **nothing** to inform the public about the methane and nitrous oxide threat. We ask this Government to take the following steps:

- **Inform the public of all planned steps to counter Climate Change.**

The EU is actively encouraging Organic production - e.g. In Austria the figure exceeds 20% and many government's subsidise organics - however in the UK less than 4% of Farmland is used organically. France and Denmark have set 50% and 40% reduction by 2022.

We ask that the UK government:

- **Urgently adopt similar reduction in pesticide use.**
- **Introduce pesticide tax (like Denmark) to fund environmental clean up.**
- **Set a target of 20% of farmland to be organic or in conversion by 2022.**

PLEASE MAKE OUR ENVIRONMENT & FUTURE A PRIORITY.
